AutoCAD by program category Drafting The drafting component of AutoCAD allows users to create two-dimensional (2D) and three-dimensional (3D) drawings. For a beginner, AutoCAD offers a two-step process for creating 2D drawings: you first draw the object using a 2D drafting tool such as a straightedge, a compass, or a protractor, and then create a two-dimensional drawing using a 2D drafting tool such as an Eraser or a ruler. After creating a drawing, you can edit it or convert it into a 3D drawing using a 3D drafting tool. Drafting is performed using two sets of commands. The main set of commands, collectively referred to as “modify,” allows the user to manipulate the drawing object, such as creating a face and adjusting the length of a line. The second set of commands, collectively referred to as “create,” allows the user to create new drawings or convert an existing 2D drawing into a 3D drawing. The most common use of these commands is to insert, move, rotate, and scale a 2D drawing. The 3D components of AutoCAD allow users to create 2D and 3D drawings. These 3D components include 3D blocks, text, dimensions, profiles, dimension styles, surfaces, Boolean operations, and many other drawing features. 3D drawing is a separate component of AutoCAD compared to the 2D drafting component, and is performed by using two sets of commands: one for 2D drawing and another for 3D drawing. This distinction between 2D and 3D drawing is present in the two-step drafting process described above. After a user draws

I have a table called myTable and I am wanting to select data from myTable and put it into a string array.

Currently, when I run the code below I get a "Cannot use object of type stdClass as array" error. \$myArray = array(); \$sql = "SELECT \* FROM myTable"; \$result = mysqli\_query(\$db, \$sql); while(\$row = mysqli\_fetch\_assoc(\$result)){ \$myArray[] = \$row; } What am I missing? Thanks. A: I don't think you need to do the fetch-assoc() step because you've already fetched all of the data. You're probably looking for something like: \$myArray = array(); \$sql = "SELECT \* FROM myTable"; \$result = mysqli\_query(\$db, \$sql); while (\$row = mysqli\_fetch\_assoc(\$result)) { \$myArray[] = \$row; } mysqli\_fetch\_assoc() only fetches the current row - not every row in the query. If you want all of the rows, you need to use mysqli\_fetch\_all() or mysqli\_fetch\_all\_assoc() FAIRVIEW PARK, Ohio (AP) — A councilman's frustrated girlfriend had an uncharacteristic outburst and punched him in the face, according to police. ### What's New in the?

Using AutoCAD, you can quickly import an external reference document directly into your drawing, and quickly incorporate changes from your references with only a few mouse clicks. The Import Markup command has been modified to automatically open the external file in Adobe Reader so that you can use the existing Adobe Reader preferences, enabling better viewing and commenting of the imported page. Using Windows MultiPoint Tablet, drag and drop, or two-finger pan gesture, you can quickly place the imported reference on a drawing window. With Markup Assist, you can quickly import and/or comment on previously imported page references using point annotations in the drawing. You can quickly import new references from Acrobat Reader (version 12 or later), Word, Excel, or PowerPoint files. As you work, comments appear on the imported page, using any color and font you choose. You can save and sync the comments with your own local copy of the reference. Inline tooltips show tool and annotation information in your drawing. By adding a tool tip to a point, an annotation, or text, you can easily reference important points in your drawing and see the information right where you want it.
