It has also been extended to support text objects. Support for DXF also includes the ability to export to DXF, converting DXF to AutoCAD drawing objects, and importing AutoCAD objects into other software and programs such as Inventor, MATLAB, Excel, Photoshop, Adobe Acrobat, CorelDRAW, Apple's Keynote, AutoCAD Map 3D, Microsoft Excel, and Microsoft Word. AutoCAD can import and export drawing object data, other than DXF and DWG data. This includes importing and exporting data from and to GDL, IFC, VRML, CATIA V5, and other CAD file formats. Starting with AutoCAD 2010, the drawing editor uses XML and HTML for the Object Browser. The XML is designed to facilitate a custom user interface. XML format was used for object updates in AutoCAD. This led to .NET-based AutoLISP language. Development Tools AutoCAD uses Visual Studio to write its own software. AutoLISP is a Visual Studio 2005 built-in language. Visual Studio 2017 offers a free version of AutoLISP that can be installed on both the professional and standard editions of Visual Studio, as well as the free community edition. With Visual Studio 2017 you can also develop AutoLISP projects for AutoCAD using C++. AutoLISP supports the addition of custom functions and functions from other programs. By using an Autodesk Exchange Host, other users can access AutoLISP functions and data through the .NET Framework. A large number of third-party AutoLISP-based add-ons are available from the Application Store. AutoLISP supports the use of VBA. Developers can use VBA to automate processes in AutoCAD, such as document and drawing creation, save functions, package creation, and drawing updates. A number of C++ classes are available for developers. They support the integration of Autodesk code with other programs. The a1d647c40b
