(Credit: YouTube) History of AutoCAD Activation Code AutoCAD has been in continual development since 1982. In April 1995, Autodesk acquired the asset of CadQuery, which produced a CAD design software that added digital modeling capabilities to AutoCAD, in addition to a parametric modeling and engineering application named Dynamic Structures. The addition of Autodesk Dynamic Structures to AutoCAD in 1996 made AutoCAD a full-featured, 3D drafting and design system. Autodesk then released the current version of AutoCAD, AutoCAD LT, which is part of AutoCAD LT Design Suite, in June 1999. AutoCAD LT and AutoCAD LT Design Suite are designed to provide automatic modeling, drafting, and design capabilities to users for small- to medium-sized projects, and offer a simplified user interface compared to AutoCAD. Who is the target audience of AutoCAD? The software has been designed to make 3D modeling easy for the following users: In the following table, which is based on information available at the time of writing, AutoCAD 2018 is shown to have a less than 3% share in the enterprise CAD market, whereas the rest of the market has roughly a 50% share in 3D engineering. Thus, the actual share in the enterprise market might be higher than what is shown in the table. Industry Design Market Share for Autodesk's Enterprise CAD Market (based on InfoWorld's CAD Market Report) Professional CAD Software Market Share (2018 InfoWorld Reports) Among software vendors, Autodesk and PTC are the largest software vendors of AutoCAD. AutoCAD 2017-2018 In 2016, Autodesk launched its new version of AutoCAD, AutoCAD LT, which focused on the ability to create 2D drawings and sheets, as well as 3D parametric models. AutoCAD LT Design Suite is a version of AutoCAD LT that adds a parametric modeling and engineering system called Autodesk Dynamic Structures to the suite. In addition to the features found in AutoCAD LT, Dynamic Structures adds to AutoCAD LT the ability to model and design a parametric system based on one or more CAD components. AutoCAD LT, as a stand-alone version, is designed for small- to medium-sized projects. Additionally, AutoCAD LT Design Suite was

Hepatitis C virus-associated fatty liver disease: A systematic review and meta-analysis. Hepatitis C virus (HCV) infection is a leading cause of chronic liver disease worldwide. Among those infected with HCV, there is a vast variability in disease progression, ranging from a self-limiting infection to a life-threatening disease. Fatty liver disease is a frequent hepatic manifestation of chronic liver disease. Although it has been recognized as an independent risk factor for the development of chronic liver disease in recent years, there is a lack of consensus regarding the prevalence and risk factors of HCV-associated fatty liver disease. The aim of this study was to perform a systematic review and meta-analysis of the studies reporting the prevalence of HCV-associated fatty liver disease. A comprehensive search was performed by a librarian in Medline, Web of Science, Cochrane Library, Embase, and Scopus to identify relevant articles published before October 2017. The Cochrane Collaboration's tool was used for assessing the quality of each included study. A random effects model was applied to calculate pooled prevalence. Heterogeneity among studies was evaluated by the Cochran Q statistic and I2 test. Sensitivity analysis was performed to evaluate the robustness of the pooled prevalence. The pooled prevalence of HCV-associated fatty liver disease was 15% (95% CI 12-18%). Most of the heterogeneity among the studies was caused by population characteristics (e.g., age, fibrosis stage), and study design. Additionally, large and multicenter studies are needed for the determination of the incidence and prevalence of HCV-associated fatty liver disease.Q: JavaScript - Unexpected results from date parsing I have the following piece of code: var date = "2015-04-02T23:59:59"; var dateValue = date.split("T"); var dateTime = dateValue[1]; var dateTimeValue = date.split("."); var month = dateValue[0]; var day = dateValue[1]; var hours = dateValue[2]; var minutes = dateValue[3]; var seconds = dateValue[4]; However, for some reason, minutes always equals to 0, even if it is actually part of the date string. What I'm I doing wrong here? A: You are confusing minutes with milliseconds. You can use momentjs: a1d647c40b
